Precision

is not only defined by degrees of exactness. It is defined by the vision and skill of engineers. By problems solved, challenges overcome, and reputations made. The real value of precision is the power it gives engineers to turn plans into reality.

Asimeto was founded in 2007 by renowned German metrologist Manfred Eisinger. Since then, the company has rapidly established a reputation for manufacturing high performance precision tools and solutions and delivering them at unexpectedly affordable prices.

Asimeto continues to win market share by applying German metrological design, American technological innovation, and Asian manufacturing competitiveness across a broad range of integrated precision solutions, distributed through a global network. Every tool is ISO 17025 certified for dependable accuracy and to ensure calibration is compliant with the regulatory requirements of each local market. Increasingly, Asimeto is the choice of engineers the world over including companies like Volkswagen, Guhring, and Boeing. We invite you to discover why.

To supplement the industry standard 12 month warranty an additional 12 month warranty is available by registering your individual purchase online at www.asimeto.com within 30 days from the date of purchase.

Appearances and Specifications

Appearances and specifications are subject to change without prior notice for product improvement.

RECALIBRATE YOUR EXPECTATIONS

Downtime, poor quality and rising costs are a few variables unacceptable in any manufacturing environment and you need to trust that your suppliers have your back.

At Sowa Tool, we take this responsibility very seriously and why we are really proud to introduce our new Asimeto North American Catalog. With your feedback, we have identified a mix of the most popular precision metrology tools used in aerospace, automotive, energy, and general manufacturing.

Every Asimeto tool we supply comes with an ISO 17025 calibration certificate so our customers can be confident that the measuring accuracy conforms to national specifications. Coupled with Asimeto's strong quality promise, we've lowered prices across hundreds of items to make sure our customers are receiving the highest possible value for their dollar. Additionally, we've made significant investments in local inventory to ensure these products are consistently and reliably in stock to support our customers all across North America. In fact, our goal at Sowa is to achieve 100% service level on every item in this catalog. While reaching this goal may sound difficult earning and keeping your trust as a valued supplier is our number one priority.

We know you have a choice on where to buy your favorite brands. We thank you for choosing Sowa Tool and Asimeto.

Asimeto Calibration Laboratory

The quality and measuring accuracy of all Asimeto precision tools are guaranteed by the Asimeto Calibration Laboratory. All tools are inspected for conformance to the Asimeto design specifications and are then processed through the Asimeto calibration laboratory. Only the latest state of the art calibration equipment has been selected, from the leading global manufacturers, to ensure that the calibration costs are contained by increasing throughput, without compromising measurement accuracy or repeatability.

The Asimeto Calibration Laboratory has designed and incorporated universal calibration software that applies the applicable accuracy standard to the specific destination market of the precision measuring tool. ASME, DIN, and JYG are all supported.

It all means precisely that the dedication and diligence of the Asimeto Calibration Laboratory assures you that the accuracy is within the specifications of your local standard.

Calibration Lab

The Differences Between NIST and ISO Certification

NIST Traceable (National Institute of Standards and Technology)

A NIST certification means that a product has been tested against NIST's Standard Reference Materials (SRMs) and meets the organization's exact specifications.

The measurement is made using a standard reference artifact (in most cases a gauge block) that NIST has certified to be a specific size. Theoretically, this provides for an unbroken chain of measurement reference all the way back to a primary national standard. It does not, however, consider how that measurement is made. This gives rise to several questions:

1. Is the measurement made in a controlled environment, where temperature and humidity are tightly controlled within the tolerances required to make accurate measurements?
2. Have both the standard reference artifact and the product being measured been allowed to equilibrate in the measurement environment to ensure that both are stable at the time of measurement?
3. Is there a procedure for making the measurements?
4. Has the procedure been demonstrated to be repeatable in an R&R study?
5. Is the technician performing the measurement trained to operate the equipment properly?
6. Is the technician periodically tested to demonstrate continuing proficiency?
7. Is it possible to contact the company that supplied the traceable certificate to obtain a more detailed report certifying that the measurement is accurate?

ISO Certified (International Standards Organization)

ISO 17025 certification means not only that it has been tested against NIST's (in the US, or other countries Standards Institutes) SRM through an unbroken chain of calibrations, but also that the technician is qualified to perform this calibration using an accepted method of calibration and is monitored by an effective Quality Management System, and indicates the equipment used to perform this calibration has been calibrated through an unbroken chain to the SRMs.

This measurement is also made using a gauge block or other standard reference artifact, however the measurement takes place in an ISO 17025 accredited calibration laboratory. In addition, that laboratory is periodically audited by an ISO 17025 accrediting body to ensure all requirements are being met. ISO 17025 requires that all calibration laboratories adhere to the following:

1. Measurement is made in a controlled environment, where temperature and humidity are tightly controlled within the tolerances required to make accurate measurements.
2. Both the standard reference artifact and the product being measured are allowed to equilibrate in the measurement environment to ensure that both are stable at the time of measurement.
3. There is a written procedure for making the measurements.
4. The procedure has been demonstrated to be repeatable in an R&R study.
5. The technician performing the measurement is trained to operate the equipment properly.
6. The technician is periodically tested to demonstrate continuing proficiency.
7. The accredited calibration laboratory supplies a traceable certificate, with detailed report, certifying that the measurement is accurate.

All ISO certificates of calibration adhere to ISO 17025:2005 standards, including: trace numbers, date of calibration, CMC data (Calibration Measurement Capability) and certified inspector signature.

IP67 Coolant Proof Digital Calipers

- Resolution: 0.0005" / 0.01mm
- Absolute function, there is no need to set the zero
- Absolute or incremental measuring modes
- Metal Housing design will allow the caliper to be used in normal workshop conditions and is resistant to coolant, water, dust or oil
- Conforms to the IP67 rating
- Hold function for easy reading
- Inch/Metric conversion
- Big Screen design allows for very easy reading while also remaining resistant to coolant, water, dust or oil
- Auto power On/Off
- Power: 3V lithium battery
- With Thumb Wheel

Universal Caliper Accessory Kit

- The original caliper jaw attachment accessory
- The square bodies attach to the jaws of any 4", 6", 8" caliper. Threaded holes are located in the front, both sides, and the bottoms of the bodies, allowing the use of the points on any side
- Measures slots, grooves, shoulders, holes, pockets, and takes ID and OD measurements
- Steel, Black Oxide finish

Code No.: 7300110

Kit contains:	Qty	Description
Universal Caliper Bodies	1 pair	3/8" square x 2" length. Slot for caliper jaws is 0.147" wide. 4-40 holes for set screws fasten the body to the caliper jaw
Flat Points	1 pair	3/16" diameter x 0.810" length. 4-48 threads
Cone Points	1 pair	3/16" diameter x 0.810" length. 4-48 threads
Stem Points	1 pair	3/16" body diameter, 0.084" stem diameter x 0.820" length. 4-48 threads
Ball Points	1 pair	3/16" diameter x 0.810" length. 4-48 threads

Centerline Gauges

- Measures centerline distances
- Easily attaches to Dial, Vernier, and Digital Calipers
- 60° conical points
- Hardened Steel with Black Oxide finish
- Attaches in seconds with set screws
- Supplied in high-impact tubes with Allen wrench
- User friendly instructions

Absolute Digital Single Hook Depth Calipers - Data Output

- Resolution: 0.0005" / 0.01mm
- The stationary measuring surface on the beam protrudes at right angles (measuring hook) to allow for the measurement of depths, internal groove positions, and other intricate characteristics
- Measurements can be taken on either side of the measuring hook
- All measuring surfaces are hardened
- Data output cable: 7900054
- Wireless data transfer output: 7901001

IP Ratings

First Digit: Solids

The first digit indicates the level of protection that the enclosure provides against access to hazardous parts (e.g., electrical conductors, moving parts) and the ingress of solid foreign objects.

Level	Protected Against	Effective Against
0	Not protected	No protection against contact and ingress of objects
1	>50mm	Any large surface of the body, such as the back of the hand, but no protection against deliberate contact with a body part.
2	>12.5mm	Fingers or similar objects.
3	>2.5mm	Tools, thick wires, etc.
4	>1mm	Most wires, screws, etc.
5	Dust Protected	Ingress of dust is not entirely prevented, but it must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment; complete protection against contact.
6	Dust Tight	No ingress of dust; complete protection against contact.

Second Digit: Liquids

Protection of the equipment inside the enclosure against harmful ingress of water.

Level	Protected Against	Effective Against
0	Not protected	—
1	Dripping water	Dripping water (vertically falling drops) shall have no harmful effect.
2	Dripping water when tilted up to 15°	Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle up to 15° from its normal position.
3	Spraying water	Water falling as a spray at any angle up to 60° from the vertical shall have no harmful effect.
4	Splashing water	Water splashing against the enclosure from any direction shall have no harmful effect.
5	Water jets	Water projected by a nozzle (6.3mm) against enclosure from any direction shall have no harmful effects.
6	Powerful water jets	Water projected in powerful jets (12.5mm nozzle) against the enclosure from any direction shall have no harmful effects.
7	Immersion up to 1m	Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time (up to 1m of submersion).
8	Immersion > 1m	The equipment is suitable for continuous immersion in water under conditions which shall be specified by the manufacturer. Normally, this will mean that the equipment is hermetically sealed. However, with certain types of equipment, it can mean that water can enter but only in such a manner that it produces no harmful effects.

0.25" dia. stem	7500351

Articulating Arm Magnetic Bases

- Accepts test indicators with dovetail clamping mechanism
- Dial gauges can be held by the 3/8" or 8mm diameter stem or by the lug backing plate
- Arm has 3 articulating joints that can be locked with the single hand knob
- The rotary knob switches natural magnet on or off
- The precision surfaces and the bottom V are securely fastened to the ferrous work piece or machine table when the rotary knob is in the on position
- 7602011 does not have fine adjustment

Digital Protractors - Level Type

- This protractor provides an immediate digital reading of any angle in a full circle with 0°-90°-0°-90°-0° readings.
- The machined Aluminum frame is rigid and light with a precise platform that allows the sensor and its microprocessor circuit to provide high accuracy throughout the entire 360° range
- Four 90° quadrants for display purposes
- Calibrates in minutes without any special fixtures
- HOLD button for freezing a reading in an unreadable position
- ZERO button allows 2 measuring modes, Standard and Alternate Reference
- V-grooves on top and bottom for use on curved surfaces
- Angle displayed upright regardless of protractor position
- Item 7490162 comes with magnet on base, which is helpful for fixing

STANDARD ACCESSORIES

- CR2032 Battery, Warranty Card, Instruction Manual

Code No.	7490160 / 7490162

Pin Gauge Sets

- For quick and accurate measurements. Measure hole sizes, slot widths, calculate distances between holes, use as Go/NoGo gauging, etc.
- Each set includes pin gauge holder
- Furnished in attractive molded plastic case
- Class ZZ guaranteed to 0.0002"/0.005 mm tolerance limit
- Inspected with equipment which has been calibrated and is traceable to NIST
- Marked with size and direction of tolerance on gauge over 0.060"/1.5 mm
- Hardened drill rod 60-62 HRC, 2 inches long
- 10 micron finish or better
- Black Oxide coating prevents corrosion and shows gauge wear
- Certificate of accuracy included

Impact Hardness Tester

- Large screen (128×64 dot matrix LCD), allows for clear display of all functions and parameters
- Hardness test can be taken at any angle including inverted
- A wide measuring range supports the hardness of all metallic materials. Hardness results are directly displayed in HRB, HRC, HV, HB, HS, HL hardness scales
- Six impact devices are available for special application with automatic impact device recognition
- Diameter of carbide ball: 3mm
- Large capacity memory storage of 500 sub groups. Stored information including single measured value, mean value, test data, impact direction, impact times, material, and hardness scale are available
- Five languages are supported: English, French, German, Italian, and Spanish
- Upper and lower limit can be preset. An audio alarm will automatically sound when the reading is outside of the preset limits
- Battery voltage information is displayed including the charge status
- Calibration function is available
- USB1.1 port allows for information to be uploaded directly to a PC
- High speed thermal printer allows for the readings to be immediately printed
- 6V Ni-MH rechargeable battery are supplied. The batteries can be charged with the integrated charger. Up to 150 hours of continuous operation battery life between charges (eL off and no printing)
- Automatic power off after five minutes

STANDARD ACCESSORIES

- Impact device 1 pc
- Hardness test block 1 pc
- Small support ring 1 pc
- Cleaning brush 1 pc
- Battery charger 1 pc
- Paper for printing 1 pc
- Manual 1 pc
- DataPro software 1 pc
- Communication cable 1 pc

Range	Accuracy	Application Range	Impact Devices	Impact Capacity	Code No.
(170-960) HLD (17-68.5) HRC (19-651) HB	HLD: ±5 HRC: ±1 HB: ±4	Test normal smooth, flat surfaces	D	11 Nmm	7640171

Hardness Test Block

Description	Range of Hardness	Dimension	Weight	Code No.
